Address briefly the following collectively as a team

1. for each part of the project separately; i.e., P1, P2:

a. which aspect was easiest to do and why

P.1: The project setup, including github and the file structure and the hello parser.

P.2: Refactoring commands to resolve bugs.

b. which aspect was hardest to do and why

P.1: Navigating the javadocs.

P.2: Figuring out how to manipulate things on the network.

2. for each of the following, how did it contribute to your ability to do this project:

Tasks 1, 2, 3, 4 (collectively) and the status reports

The status reports didn't contribute anything, we met as a team a lot.

Tasks 1, 2, 3, 4: Task 2 showed the higher-level organization which helped with testing.

3. for the project overall (over the entire quarter)

a. which aspect was easiest to understand about its development

Easy time understanding that we were writing code to overwrite classes inside the .jar file.

b. which aspect was hardest to understand about its development

Hard to understand the javadocs and the difficulty with that made it hard to understand the components in a way we needed to create meaningful tests.

5. how did the project contribute to your understanding of complex organized systems?

Teamwork, collaborating with others to solve problems and form an understanding of how the system works and how the components are related and interacting.

6. how are you going to avoid becoming The Cartoon in your career?

Continuously collaborating with teammates and reviewing each others code to ensure that there is an understanding.
